Art Unit: 1775

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-8, drawn to a process for electroless plating, classified in class 427, subclass 436.
- II. Claims 9 and 10, drawn to a solution used for electroless plating, classified in class 106, subclass 1.22+.
- III. Claims 11, 12, and 14, drawn to a composite material, classified in class 428, subclass 626.
- IV. Claim 13, drawn to a process for electroplating copper, classified in class 205, subclass 239.
- 2. The inventions are distinct, each from the other because of the following reasons:
- 3. Inventions of Group I and of Group II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product of Group II can be used to infiltrate a resin substrate to confer higher conductivity thereto by copper ion doping.
- 4. Inventions of Group I and of Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and

Application/Control Number: 10/696,552

Art Unit: 1775

materially different process (MPEP § 806.05(f)). In the instant case the product of Group III can be made by a copper sputtering deposition process.

Page 3

- 5. Inventions of Group I and of Group IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions relate to an electroless deposition process on a resin versus an electrolytic deposition process on a copper layer.
- 6. Inventions of Group II and of Group III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions relate to an aqueous solution containing copper ions and other ingredients in dissolved state, further including possibly a solid resin layer in the aqueous solution, versus a laminate article having defined strata.
- 7. Inventions of Group II and of Group IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions relate to an aqueous solution containing copper ions and other ingredients in dissolved state, further including possibly a solid resin layer in the aqueous solution, versus

Application/Control Number: 10/696,552

Art Unit: 1775

a method for electrolytically plating a copper layer on a laminate article having defined strata.

Page 4

- 8. Inventions of Group III and of Group IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product can be used in a process that would confer a non-copper over-layer or in a process that confers a copper over-layer but does so by a different process, such as by a sputter deposition process, for example.
- Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 10. Because these inventions are distinct for the reasons given above and the search required for each of Groups I-IV is not required for each of the other of Groups I-IV, restriction for examination purposes as indicated is proper.
- 11. Due to the complexity of the restriction requirement, a telephone call was not made to Mr. Corless to make an oral election.
- 12. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Application/Control Number: 10/696,552 Page 5

Art Unit: 1775

13. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

CONCLUSION

- 14. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael La Villa whose telephone number is (571) 272-1539. The examiner can normally be reached on Monday through Friday.
- 15. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Deborah Jones can be reached on (571) 272-1535. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
